

ABSTRACT

A BD-ROM stores a video stream and a plurality of pieces of copy control information. The plurality of pieces of copy control information include "CCIforHD with CM", "CCIforSD with CM", "CCIforHD without CM", and "CCIforSD without CM". The video stream constitutes video composed of a plurality of video streams. Among the plurality of pieces of copy control information, "CCIforHD with CM" and "CCIforSD with CM" indicate whether recording is permitted of a video signal converted from the video stream and output with addition of supplemental information. On the other hand, "CCIforHD without CM" and "CCIforSD without CM" indicate whether recording is permitted of the video output without addition of the supplemental information.
